

# AstraNova Technologies Pvt. Ltd. — IT & AI Security Policy

## Section 1: Purpose / Definition

AstraNova Technologies Pvt. Ltd. (hereinafter called "AstraNova" or "the Company") handles important data, code, and artificial intelligence models. The IT & AI Security Policy sets the safety rules for using tools, computers, and networks. This policy protects company ideas, keeps customer data safe from hackers, and guides employees on how to use AI tools safely without leaking private information.

## Section 2: Scope

This policy applies to all permanent employees, interns, and contract workers at AstraNova. It covers all devices used for work, such as laptops and phones. It applies when working inside the Pune office, from home, or from any other approved remote location.

## Section 3: Eligibility

Every person who receives a company laptop, email account, or access to the network must follow this policy. These security rules take effect from your very first day of work. Following these rules is mandatory to keep your network access active.

## Section 4: Rules & Guidelines

### 4.1 Device and Password Safety

Employees must only use the official laptop provided by AstraNova for work. You must never let friends or family use your work laptop.

- **Passwords:** Your account password must be strong (at least 14 characters with letters, numbers, and symbols). You must change your password every 90 days.
- **Device Locking:** Always lock your computer screen when you step away from your desk, even for a short break.
- **Network Access:** You must use the official company VPN and Multi-Factor Authentication (MFA) every time you log in from home. Never use public Wi-Fi without the VPN.

### 4.2 Safe Use of AI and LLM Tools

AstraNova is an AI-first company, but we must protect our code and data.

- **Public AI Tools:** Do not paste any proprietary company code, client project data, or personal employee details into public AI tools, chat systems, or online code helpers. Public systems can save your text, which leads to data leaks.
- **Internal AI Tools:** Only use the secure, internal enterprise AI platforms provided by AstraNova for debugging, testing, or content generation.
- **Open-Source Models:** Do not download or train external AI models on your work laptop without written approval from the InfoSec team.

#### 4.3 Software and Downloads

You must not install unapproved software, games, browser extensions, or personal messaging apps on your work laptop. The IT team blocks these downloads to prevent virus attacks. If you need a specific tool or code library for a project, you must ask the IT helpdesk for approval first.

### Section 5: Process / Workflow

If you see a security problem, receive a fake email, or lose your laptop, follow these steps:

```
Employee discovers a security issue or loses their device
↓
Employee calls the IT Hotline or emails security@astranova.com right away
↓
InfoSec team locks the device or account within 30 minutes to stop data leaks
↓
IT team checks the system logs to see what data was affected
↓
HR and IT teams apply fixes and write a short security report
```

### Section 6: Roles & Responsibilities

#### 6.1 Employee

- Follow all password, VPN, and AI tool usage rules every day.
- Complete the mandatory basic security training once a year.
- Report fake emails (phishing) and lost devices immediately.

#### 6.2 Reporting Manager

- Ensure all new team members receive their secure laptops and training on time.

- Remove network access flags when an employee leaves the team or changes roles.

### 6.3 InfoSec and IT Teams

- Monitor network traffic for dangerous activity or data leaks.
- Keep laptop software and antivirus programs updated automatically.
- Help employees resolve connection issues and unlock accounts safely.

## Section 7: Exceptions

There are no general exceptions to data safety. If a technical role requires special access to test system bugs or work with unique datasets, the employee must get a time-limited digital clearance form signed by the Chief Information Security Officer (CISO) before starting the task.

## Section 8: Examples

- **Scenario A (Handling a Fake Email):** An engineer gets an email that looks like it is from the company CEO. The email asks the engineer to click a link to view an urgent project update. The engineer notices the sender email address looks slightly strange. They do not click the link and click the "Report Phishing" button in their email app right away.
- **Scenario B (Debugging Code with AI):** A developer is stuck on a hard coding problem. Instead of pasting the real project code into a public web AI tool, the developer opens AstraNova's secure internal AI coding assistant to find a solution. This keeps the company's code hidden and safe.

## Section 9: Important Notes

- **Avoid:** Never write down your account passwords on sticky notes and leave them on your desk or laptop case.
- **Best Practice:** Restart your work laptop at least twice a week. This allows the IT team to push automatic security updates and patch system bugs while you sleep.

## Section 10: Frequently Asked Questions (FAQ)

### Q1: Can I use public AI websites to write code for my project?

A1: No. Sharing company code or client details with public AI tools is strictly banned. You must use our secure, internal enterprise AI tools.

### Q2: What should I do if my work laptop is lost or stolen?

A2: Call the IT security hotline immediately so the team can wipe the laptop memory remotely and protect company data.

**Q3: Can I connect my work laptop to a coffee shop Wi-Fi network?**

A3: Yes, but you must turn on the official AstraNova VPN before opening any work apps, tools, or websites.

**Q4: How often must I change my main account password?**

A4: The system will prompt you to change your password every 90 days to maintain high security.

**Q5: Am I allowed to connect my personal phone to the office Wi-Fi?**

A5: You can connect to the guest Wi-Fi network, but personal devices cannot connect to the secure internal corporate network.

**Q6: What happens if I fail to complete the yearly security training?**

A6: The IT team will temporarily suspend your network login account until you complete the mandatory security course.

**Q7: Can I download open-source code libraries for my project?**

A7: You must check the license terms and submit a quick request ticket to the IT helpdesk before downloading any new tools.

**Q8: Is it okay to use my work email to sign up for personal websites?**

A8: No. Your corporate email address should only be used for official company business and approved work tools.

**Q9: What should I do if my Multi-Factor Authentication (MFA) app shows a login request that I did not start?**

A9: Deny the request immediately and change your account password, then alert the InfoSec team by sending a quick email.

**Q10: Can I install a personal chat app or game on my work computer?**

A10: No. Installing personal software or unapproved games on company devices is strictly against our safety policy.
